Title and Abstract

Title	Podcast Media in Consultation Services to Develop Academic Stress Prevention Skills
Abstract	The rapid digitization of education in a pandemic has an impact on academic stress conditions. Counsellors have not implemented various innovative media but need relevant and millennial media to support consulting services with podcasts. This article aims to analyze the feasibility of podcast media in consulting services to develop academic stress prevention skills. Research and development limited to five stages help know the feasibility of podcasts as support for consulting services, especially academic stress prevention skills. The data analyzed the feasibility questionnaire instrument through expert validators, media, and practitioners (counsellors) quantitatively with percentages and inter-rater analysis. The results of the research show that podcast media is quite relevant to use in consulting services. The relevance and accuracy of podcast media can adjust to

the content of supporting material. Prevention of academic stress isn't only with knowledge but skills to cope with academic stress in all conditions, especially in pandemic and post-pandemic situations. Professional and millennial counsellors can develop skills in the use of podcast media in consulting services. Can use Podcast media directly in consulting services. Recordings of podcast results can be used indirectly in consulting services or group guidance services, group counselling, individual counselling, and classical guidance as a follow-up.

Abstract: The rapid digitization of education in a pandemic has an impact on academic stress conditions. Counsellors have not implemented various innovative media but need relevant and millennial media to support consulting services with podcasts. This article aims to analyze the feasibility of podcast media in consulting services to develop academic stress prevention skills. Research and development limited to five stages help know the feasibility of podcasts as support for consulting services, especially academic stress prevention skills. The data analyzed the feasibility questionnaire instrument through expert validators, media, and practitioners (counsellors) quantitatively with percentages and inter-rater analysis. The results of the research show that podcast media is quite relevant to use in consulting services. The relevance and accuracy of podcast media can adjust to the content of the supporting material. Prevention of academic stress isn't only with knowledge but skills to cope with academic stress in all conditions, especially in pandemic and post-pandemic situations. Professional and millennial counsellors can develop skills in the use of podcast media in consulting services. Can use Podcast media directly in consulting services. Recordings of podcast results can be used indirectly in consulting services or group guidance services, group counselling, individual counselling, and classical guidance as a follow-up.

Keywords: Academic stress; Consultation; Podcast media

Introduction

Assistance to students as part of sustainable self-development is an element of education (Suriansyah, 2011). The pandemic era since 2020 has opened the gates of digital education, which limits academic actualization (W. N. E. Saputra, Wahyudi, et al., 2021). However, many lives in Italy, Iran, South Korea, England, China, Japan, the United States, Germany, and other countries, including Indonesia (Aminah, 2020) have been affected big. A school is a place for the learning and self-development of students, one of which is the ability to manage educational problems, personal planning, social planning, academic planning, and career planning. The basic concept is that student's success and failure levels are created under current conditions (Sibuea & Safta, 2017). Student achievement is past the minimum assessment criteria (Yuneti, 2017). Achievement is a new spirit and fighting power because it has a significant impact on self-confidence.

Various obstacles in online learning and blended learning arise. The ability to adjust learning from face to face, then online and changing to blended learning as a change in learning models (Minister of Education, 2020). The demands of the implementation of learning cause academic stress on students and require solutions for teachers, students, and parents. Parents and friends as supporting factors for preventing academic stress (Mosanya, 2021). Academic stress will harm cognitive function and memory function in an individual's brain (Lin et al., 2020).

The fact that academic stress conditions impact academic performance is the cause of severe academic stress (Mahapatra & Sharma, 2020). Another point is that academic stress significantly affects students' fear of the future (Moawad, 2020). The condition of academic stress that occurs due to the Covid-19 pandemic has a significant effect on the learning system and student conditions. Stress is a psychological pressure to overcome obstacles and limitations in the process of life (Muslim, 2020). Stress is a form of experience based on self-view in reality conditions (Gunarya *et al.*, 2010). Stress is closely related to self-pressure in needs of reality and the emergence of anger, feelings of disappointment, and anxiety about the emergence of failure.

Students in a pandemic or post-pandemic conditions still arise problems related to online and blended learning assignments, resulting in academic stress. Personal pressure impacts learning as part of academic stress (Barseli *et al.*, 2017). Academic stress conditions affect the learning process and achievement and health and sleep disorders (Oktavia *et al.*, 2019). School counsellors play a significant role in student education and students' ability to manage student problems, especially academic stress. School counsellors play a significant role in student education and students' ability to manage student problems, especially academic stress. Assistance from school counsellors plays a role in preventing academic stress through psychosocial interaction interventions and stress coping (Joseph *et al.*, 2021; Sari *et al.*, 2020; Shehadeh *et al.*, 2020).

The role of guidance and counselling in consulting services is to help develop skills in managing academic stress. Consulting services as an intervention strategy help reduce problems individually or in groups (Suryani, 2017). Consulting services assist individuals in problem-solving rather than process-oriented knowledge and skills (Fan *et al.*, 2021). Process orientation in consulting services is exciting in developing students' self and skills towards preventing academic stress. The use of media as an attraction to generate enthusiasm and enthusiasm in consulting services. As an alternative in channelling messages, media can stimulate thoughts, feelings, and wills (Ekayani, 2017). Podcasts as one of the relevant media supporting consulting services in the digital and millennial era. Online counselling is a strategy to prevent academic stress (Janna, 2021); a consultation can reduce academic stress (Dewi & Muslikah, 2021).

Podcasts as relevant and millennial media to use in consulting services. The use of podcasts as an alternative media with sound or audio is preferred by millennial or post-millennial individuals (Saputra & Muharammah, 2020). Podcast media is a new form of innovation to develop students' academic stress prevention skills in consulting services by counsellors. Podcasts as a digital medium with a series of audio or video episodes (Kusuma *et al.*, 2020) is innovative and creative for counsellors. This research aims to emerge the feasibility of podcast media in consulting services to develop students' academic stress prevention abilities.

Methods

This study has three variables. The variables are (a) academic stress of students in online and blended learning conditions, (b) consulting services by counsellors, and (c) podcast media as a support for consulting services. The three variables are adjusted to current conditions and millennial and digital guidance and counselling services. The research and development design concept is limited to the fifth stage. The podcast media development stage in consulting services for academic stress prevention skills is based on the preliminary study in the first stage. The second stage is to prepare a hypothetical draft of academic stress prevention materials and consulting services with podcast media. The third stage is developing

podcast media that can be implemented in consulting services with academic stress prevention skills. The service study is the fourth stage for validators of material experts, media experts, and practitioners, namely counsellors. The fifth stage is the revision of the service study, which has been analyzed qualitatively and quantitatively.

Eligibility questionnaires to validators according to material experts, media experts, and practitioners, namely counsellors, to determine the feasibility of podcast media. The results of the service study as the final design of podcast media for the development of academic skills to prevent student stress in a pandemic or post-pandemic conditions by counsellors. The last data is discussed qualitatively. Quantitative analysis as an element of the feasibility of podcast media in consulting services. The first stage is the results of the feasibility analysis from material experts, media experts, and practitioners (advisors) quantitatively with percentages. The second stage is internet analysis with the help of the SPSS application to determine the reliability of podcast media. The results of the interpretation of the feasibility of media experts, material experts, and practitioners, with the support of trusted media podcats in counselling services as the final data.

Results and Discussion

Media podcasts from the feasibility test results get assessments from material experts, media experts, and counsellor practitioners. The media expert's evaluation results in media expert's evaluation with an average value of 90% can be used for the development of academic stress prevention skills. Media experts rate with an average score of 85%, so podcasts as a media consulting service help students with academic stress prevention with various skills. Counsellors in schools assess podcasts as media for the current era with an average score of 90%. The average rating of the three assessments is 88.3% or excellent criteria. The evaluation results recommend that the podcast media support consulting services by counsellors, especially the prevention of academic stress. The feasibility of Podcast Media in Consulting Services for Academic Stress Prevention Skills Development can be seen in table 1.

Table 1. The feasibility of Podcast Media

No	Product Test Aspect	Average Value
1	Material Expert Test	90%
2	Media Expert Test	85%
3	Test of Practitioner or Counselor	90%
	Amount	265%
	Score	88,3%
	Category	Very good

Table 1. shows the average value of several aspects, namely from the 90% Material Expert Test, 85% Media Expert Test, 90% Practitioner or Counselor Test. In very good category. Furthermore, the Podcast Media-Interrater reliability test in consulting services for academic stress prevention skills development can be seen in table 2.

Table 2. Podcast Media-Interater Reliability Test

	Intraclass Correlation ^a	95% Confidence Interval		F Test with True Value 0			
		Lower Bound	Upper Bound	Value	df1	df2	Sig
Single Measures	.500 ^b	.109	.821	4.000	9	18	.006
Average Measures	.750 ^c	.268	.932	4.000	9	18	.006

In table 2, Tested the results of the assessment for reliability with the Intraclass Correlation Coefficient (ICC). The results of the Intraclass Correlation Coefficient test with a significance of $0.006 \leq 0.05$. These data indicate that podcast media in consulting services are relevant and feasible in developing academic stress prevention skills. The analysis for the consistency rater is 0.750, which means it has a pretty good consistency. The meaning of good enough is that podcast media in consulting services is quite relevant to developing students' academic stress prevention skills.

Podcasts as a communication medium communicate with other people and convey information (Sudarmoyo, 2020), in contrast to YouTube media used to increase enthusiasm (Jannah & Baqiyatussolihat, 2021) share information. Podcast media is relevant compared to other media because it can be used directly or indirectly as a messenger. Podcast media can publish through youtube media which can also increase student enthusiasm. This media is applicable as a consultation media in developing academic stress prevention skills.

Podcasts as audio-visual media as messengers through the internet network with millennial devices (Rajic, 2013). Can indirectly podcast media in consulting services through iPhones, cellular phones, laptops, and other computer devices. The podcast themes are varied and creative to support the professional counsellor profession in any field, making it relevant for post-millennial era counsellors. Can also upload the results of podcast media recordings via YouTube and Instagram. Podcast media has the advantage that it can be uploaded and reused in guidance and counselling services, as well as learning media (Dewanti & Sujarwo, 2021), especially in preventing academic stress.

School counsellors' podcasts in consultation services can convey messages and various content through broadcasts or face-to-face (Ridha, 2021). Can also use Instagram media in consulting services to prevent academic stress, although with exciting content. Instagram is useful as a form of knowledge exchange and affective support (Carpenter et al., 2020) but has a long-term impact on Instagram addiction (Ponnusamy et al., 2020). Meanwhile, podcast media in preventing academic stress are also a face-to-face exchange of knowledge and affective support, moral messages, tolerance attitude (Supriyanto et al., 2019).

Podcasts are indirectly in audio and video that others can listen to (Laila, 2021). Postcast variations and innovations in consulting services are relevant and meaningful to students or counselees. Individuals with academic stress problems can listen and analyze the content of messages directly from the podcast media. If they meet face-to-face with a counsellor, they can practice skills in preventing academic stress. As shown in Figure 1, podcasts are interactive media that support professional counsellor consulting services for academic stress prevention. Podcasts can disseminate specific information (Quintana & Heathers, 2021), preventing academic stress with access to educational and social news (Casares Jr & Binkley, 2021).

Figure 1. Interactive Media Podcast

Podcasts from research results combined in consulting services to develop academic stress prevention skills according to the steps for making podcasts. Podcasts are generally made from pre-production, production, and review (Mayangsari & Tiara, 2019). The three stages of consulting with podcast media to develop academic stress prevention skills have fulfilled the pre-production stage with needs analysis and relevant content in academic stress prevention with skills for students. Production is carried out directly in the implementation of consulting services, and then it can be helpful for students as video and audio media. The review of podcast results can be used as a follow-up for classical guidance services, group guidance, and counselling services. Message content, material content, the follow-up to podcasts (Chan etc., 2006) are relevant for counsellors to use.

The podcast media is a learning tool with interesting, exciting material (Fadilah etc., 2017). Podcasts also provide convenience for learning purposes (Asmi, 2019). Especially in consulting services, podcast media can be used anytime and anywhere by re-listening or downloading through the WhatsApp Group application and the web (Abidin & Widodo, 2018). Counsellors must be able to create innovations in consulting services. Innovations in consulting services with various conditions of changing the digital education system must create a school climate. Counsellors must be able to create a positive school climate that impacts the development of academic achievement (W. N. E. Saputra, Supriyanto, et al., 2021). Various innovations with podcast media by counsellors can help individuals to be able to prevent their academic stress.

Conclusions and Suggestions

Academic stress due to the Covid-19 pandemic has an impact on the world of education. Academic stress affects learning achievement. Professional counsellors use face-to-face or virtual consultation services with podcast media. Media podcasts are relevant and appropriate to use to help prevent academic stress. Material content in academic stress prevention is supported and integrated to foster skills in helping academic stress prevention. Podcast media can be implemented directly in consulting services or indirectly so that podcast media recordings can be downloaded or viewed again as a support for guidance and counselling services.

The urgency of the future counsellor's professionalism with the use of digital media is by podcasts in guidance and counselling services. Relevant podcasts in the implementation of guidance and counselling services, primarily consulting services. Consultation with individual

settings or group settings with podcast media is an element of novelty in the millennial era. Professional counsellors continuously adapt to the development of the digital age in guidance and counselling services.

Podcast Media in Consultation Services to Develop Academic Stress Prevention Skills

Catatan Reviewer A: 19 November 2021

Submitted : dd-mm-yyyy, Revised : dd-mm-yyyy, Accepted : dd-mm-yyyy

Abstract: The rapid digitization of education in a pandemic has an impact on academic stress conditions. Counsellors need relevant and millennial media to support consulting services with podcasts. This article aims to analyze the feasibility of podcast media in consulting services to develop academic stress prevention skills. Research and development limited to five stages help know the feasibility of podcasts as support for consulting services, especially academic stress prevention skills. Analyzed the feasibility questionnaire instrument for expert validators, media, and practitioners (counsellors) quantitatively with percentages and inter-rater analysis. The results of the research show that podcast media is quite relevant to be used in consulting services. The relevance and accuracy of podcast media are adjusted to the content of the supporting material. Prevention of academic stress is not only with knowledge but skills to cope with academic stress in all conditions, especially in pandemic and post-pandemic situations. Professional and millennial counsellors can develop skills in the use of podcast media in consulting services. Can use Podcast media directly in consulting services. Recordings of podcast results can be used indirectly in consulting services or group guidance services, group counselling, individual counselling, and classical guidance as a follow-up.

Keywords: Academic Stress, Consultation, Podcast Media

Introduction

Assistance to students as part of sustainable self-development is an element of education (Suriansyah, 2011). The pandemic era since 2020 has opened the gates of digital education. However, many lives in Italy, Iran, South Korea, England, China, Japan, the United States, Germany, and other countries, including Indonesia (Aminah, 2020) have been affected. Big. A school is a place for the learning and self-development of students, one of which is the ability to manage educational problems, personal planning, social planning, academic planning, and career planning. The basic concept is that student's success and failure levels are created under current conditions (Sibuea & Safta, 2017). Student achievement is past the minimum assessment criteria (Yuneti, 2017). Achievement is a new spirit and fighting power because it has a significant impact on self-confidence.

Various obstacles in online learning and blended learning arise. The ability to adjust learning from face to face, then online and changing to blended learning as a change in learning models (Minister of Education, 2020). The demands of the implementation of learning cause academic stress on students and require solutions for teachers, students, and parents. Stress is a psychological pressure to overcome obstacles and limitations in the process of life (Muslim, 2020). Stress is a form of experience based on self-view in reality conditions (Gunarya dkk., 2010). Stress is closely related to self-pressure in needs of reality and the emergence of anger, feelings of disappointment, and anxiety about the emergence of failure.

Students in pandemic or post-pandemic conditions still arise problems related to online and blended learning assignments, resulting in academic stress. Personal pressure impacts learning as part of academic stress (Barseli dkk., 2017). Academic stress conditions affect the learning process and learning achievement, as well as health and sleep disorders (Oktavia dkk., 2019). School counsellors play a significant role in student education and students' ability to manage student problems, especially academic stress.

The role of guidance and counselling in consulting services is to help develop skills in managing academic stress. Consulting services as an intervention strategy help reduce

Commented [Ac1]: in general the title is quite good, specific and clear

Commented [Ac2]: the abstract is quite good, it includes the objectives, types of research and methods, a series of instruments used and recommendations for further research

Commented [Ac3]: assistance to students, is not the focus of research, it is better in the first paragraph you explain why academic stress is a dangerous thing for students.

Commented [Ac4]: In this paragraph, you should mention some references or previous research findings related to changes in learning that cause academic stress

Commented [Ac5]: please add references regarding the role of counselor

problems individually or in groups (Suryani, 2017). Consulting services assist individuals in problem-solving rather than process-oriented knowledge and skills (Fan et al., 2021). Process orientation in consulting services is exciting in developing students' self and skills towards preventing academic stress. The use of media as an attraction to generate enthusiasm and enthusiasm in consulting services. As an alternative in channelling messages, media can stimulate thoughts, feelings, and wills (Ekayani, 2017). Podcasts as one of the relevant media supporting consulting services in the digital and millennial era.

Podcasts as relevant and millennial media to use in consulting services. The use of podcasts as an alternative media with sound or audio is preferred by millennial or post-millennial individuals (Saputra & Muharammah, 2020). Podcast media is a new form of innovation to develop students' academic stress prevention skills in consulting services by counsellors. Podcasts as a digital medium with a series of audio or video episodes (Kusuma et al., 2020) is innovative and creative for counsellors. This research aims to emerge the feasibility of podcast media in consulting services to develop students' academic stress prevention abilities.

Commented [Ac6]: It's good that you have explained the design of using media as a strategy, but overall the author must add some previous research which explains that academic stress and consulting services are quite effective.

Commented [Ac7]: all good

Method

Research Variable

This study has three variables. Three variables are (a) students' academic stress in online and blended learning conditions, (b) consulting services by counsellors, and (c) podcast media as a support for consulting services. The three variables are adjusted to current conditions and millennial and digital guidance and counselling services.

Research design

The research and development design that adopts the Brog&Gall concept is limited to the fifth stage. The podcast media development stage in consulting services for academic stress prevention skills is based on a preliminary study in the first stage. The second stage is to prepare a hypothetical draft of academic stress prevention materials and skills in consulting services with podcast media. The third stage is to develop podcast media that can be implemented in consulting services with academic stress prevention skills. Service studies as the fourth stage on validators of material experts, media experts, and practitioners, namely counsellors. The fifth stage is the revision of the service study, which has been analyzed qualitatively and quantitatively.

Commented [Ac8]: all good, please adjust the writing style in the journal article

Data Collection Technique

Eligibility questionnaire to validators according to material experts, media experts, and practitioners, namely counsellors, to determine the feasibility of podcast media. The results of the service study as the final design of podcast media for developing students' academic stress prevention skills in a pandemic or post-pandemic conditions by counsellors. The last data are discussed qualitatively.

Commented [Ac9]: all good, please adjust it to the writing style of the journal article

Data Analysis Technique

Quantitative analysis as an element of the feasibility of podcast media in consulting services. The first stage of the feasibility analysis results from material experts, media experts, and practitioners (counsellors) quantitatively with percentages. The second stage is internet analysis with the help of the SPSS application to determine the reliability of podcast media. The results of the interpretation of the feasibility of media experts, material experts, and practitioners, with the support of reliable media podcats in counselling services as final data.

Commented [Ac10]: SPSS-assisted internet analysis, can explain in more detail in stage two

Results and Discussion

Result

Media podcasts from the feasibility test results get assessments from material experts, media experts, and counsellor practitioners. The media expert's evaluation results in media expert's evaluation with an average value of 90% can be used for the development of academic stress prevention skills. Media experts rate with an average score of 85%, so podcasts as a media consulting service help students with academic stress prevention with various skills. Counsellors in schools assess podcasts as media for the current era with an average score of 90%. The average rating of the three assessments is 88.3% or excellent criteria. The evaluation results recommend that the podcast media support consulting services by counsellors, especially the prevention of academic stress.

Commented [Ac11]: please add a series of media podcast development implementations, according to the fifth stage of the BROG & GALL design

Table 1. Feasibility of Podcast Media in Consulting Services for Development of Academic Stress Prevention Skills

No	Product Test Aspect	Average Value
1	Material Expert Test	90%
2	Media Expert Test	85%
3	Test of Practitioner or Counselor	90%
	Amount	265%
	Score	88,3%
	Category	Very good

Tested the results of the assessment for reliability with the Intraclass Correlation Coefficient (ICC). The results of the Intraclass Correlation Coefficient test with a significance of $0.006 \leq 0.05$. These data indicate that podcast media in consulting services are relevant and feasible in developing academic stress prevention skills. The analysis for the consistency rater is 0.750, which means it has a pretty good consistency. The meaning of good enough is that podcast media in consulting services is quite relevant to developing students' academic stress prevention skills.

Commented [Ac12]: All good

Table 1. Uji Reliabilitas-Interater Media Podcast dalam Layanan Konsultasi untuk Pengembangan Keterampilan Pencegahan Stres Akademik

	Intraclass Correlation ^a	95% Confidence Interval		F Test with True Value 0			
		Lower Bound	Upper Bound	Value	df1	df2	Sig

Average Measures	.750 ^c	.268	.932	4.000	9	18	.006

Discussion

Podcasts as a communication medium are used not only to communicate with other people but also as a medium to convey information (Sudarmoyo, 2020). This media is relevant compared to other media because it can be used directly or indirectly as a messenger. This media is applicable as a consultation media in developing academic stress prevention skills. Podcasts as audio-visual media as messengers through the internet network with millennial devices (Rajic, 2013). Can indirectly podcast media in consulting services through iPhones,

cellular phones, laptops, and other computer devices. The podcast themes are varied and creative to support the professional counsellor profession in any field, making it relevant for post-millennial era counsellors.

School counsellors' podcasts in consultation services can convey messages and various content through broadcasts or face-to-face (Ridha, 2021). Podcasts are indirectly in audio and video that others can listen to (Laila, 2021). Podcast variations and innovations in consulting services are relevant and meaningful to students or counselees. Individuals with academic stress problems can listen and analyze the content of messages directly from podcast media. If they meet face-to-face with counsellors, they can practice skills in preventing academic stress. As shown in Figure 1, podcasts are interactive media that support consulting services by professional counsellors.

Figure 1. Media Podcast yang Interaktif

Podcasts from research results combined in consulting services to develop academic stress prevention skills according to the steps for making podcasts. Podcasts are generally made from pre-production, production, and review (Mayangsari & Tiara, 2019). The three stages of consulting with podcast media to develop academic stress prevention skills have fulfilled the pre-production stage with needs analysis and relevant content in academic stress prevention with skills for students. Production is carried out directly in the implementation of consulting services, and then it can be helpful for students as video and audio media. The review of podcast results can be used as a follow-up for classical guidance services, group guidance, and counselling services. Message content, material content, the follow-up to podcasts (Chan dkk., 2006) are relevant for counsellors to use. The podcast media is a learning tool with interesting, exciting material (Fadilah dkk., 2017). Podcasts also provide convenience for learning purposes (Asmi, 2019). Especially in consulting services, podcast media can be used anytime and anywhere by re-listening or downloading through the WhatsApp Group application and the web (Abidin & Widodo, 2018).

Commented [Ac13]: quite good, you have explained the previous findings

Conclusions and Suggestions

Academic stress due to the Covid-19 pandemic has an impact on the world of education. Academic stress affects learning achievement. Professional counsellors use face-to-face or virtual consultation services with podcast media. Media podcasts are relevant and appropriate to use to help prevent academic stress. Material content in academic stress prevention is supported and integrated to foster skills in helping academic stress prevention. Podcast media

can be implemented directly in consulting services or indirectly so that podcast media recordings can be downloaded or viewed again as a support for guidance and counselling services.

The urgency of the future counsellor's professionalism with the use of digital media is by podcasts in guidance and counselling services. Relevant podcasts in the implementation of guidance and counselling services, primarily consulting services. Consultation with individual settings or group settings with podcast media is an element of novelty in the millennial era. Professional counsellors continuously adapt to the development of the digital age in guidance and counselling services.

Commented [Ac14]: all good

Podcast Media in Consultation Services to Develop Academic Stress Prevention Skills

Catatan Reviewer B: 20 November 2021

Submitted : dd-mm-yyyy, Revised : dd-mm-yyyy, Accepted : dd-mm-yyyy

Abstract: The rapid digitization of education in a pandemic has an impact on academic stress conditions. Counsellors need relevant and millennial media to support consulting services with podcasts. This article aims to analyze the feasibility of podcast media in consulting services to develop academic stress prevention skills. Research and development limited to five stages help know the feasibility of podcasts as support for consulting services, especially academic stress prevention skills. Analyzed the feasibility questionnaire instrument for expert validators, media, and practitioners (counsellors) quantitatively with percentages and inter-rater analysis. The results of the research show that podcast media is quite relevant to be used in consulting services. The relevance and accuracy of podcast media are adjusted to the content of the supporting material. Prevention of academic stress is not only with knowledge but skills to cope with academic stress in all conditions, especially in pandemic and post-pandemic situations. Professional and millennial counsellors can develop skills in the use of podcast media in consulting services. Can use Podcast media directly in consulting services. Recordings of podcast results can be used indirectly in consulting services or group guidance services, group counselling, individual counselling, and classical guidance as a follow-up.

Keywords: Academic Stress, Consultation, Podcast Media

Introduction

Assistance to students as part of sustainable self-development is an element of education (Suriansyah, 2011). The pandemic era since 2020 has opened the gates of digital education. However, many lives in Italy, Iran, South Korea, England, China, Japan, the United States, Germany, and other countries, including Indonesia (Aminah, 2020) have been affected. Big. A school is a place for the learning and self-development of students, one of which is the ability to manage educational problems, personal planning, social planning, academic planning, and career planning. The basic concept is that student's success and failure levels are created under current conditions (Sibuea & Safta, 2017). Student achievement is past the minimum assessment criteria (Yuneti, 2017). Achievement is a new spirit and fighting power because it has a significant impact on self-confidence.

Various obstacles in online learning and blended learning arise. The ability to adjust learning from face to face, then online and changing to blended learning as a change in learning models (Minister of Education, 2020). The demands of the implementation of learning cause academic stress on students and require solutions for teachers, students, and parents. Stress is a psychological pressure to overcome obstacles and limitations in the process of life (Muslim, 2020). Stress is a form of experience based on self-view in reality conditions (Gunarya dkk., 2010). Stress is closely related to self-pressure in needs of reality and the emergence of anger, feelings of disappointment, and anxiety about the emergence of failure.

Students in pandemic or post-pandemic conditions still arise problems related to online and blended learning assignments, resulting in academic stress. Personal pressure impacts learning as part of academic stress (Barseli dkk., 2017). Academic stress conditions affect the learning process and learning achievement, as well as health and sleep disorders (Oktavia dkk., 2019). School counsellors play a significant role in student education and students' ability to manage student problems, especially academic stress.

The role of guidance and counselling in consulting services is to help develop skills in managing academic stress. Consulting services as an intervention strategy help reduce

Commented [U1]: In this section, please present the state of the art, research gap, significance, up to the goal by elaborating sentences effectively

problems individually or in groups (Suryani, 2017). Consulting services assist individuals in problem-solving rather than process-oriented knowledge and skills (Fan et al., 2021). Process orientation in consulting services is exciting in developing students' self and skills towards preventing academic stress. The use of media as an attraction to generate enthusiasm and enthusiasm in consulting services. As an alternative in channelling messages, media can stimulate thoughts, feelings, and wills (Ekayani, 2017). Podcasts as one of the relevant media supporting consulting services in the digital and millennial era.

Podcasts as relevant and millennial media to use in consulting services. The use of podcasts as an alternative media with sound or audio is preferred by millennial or post-millennial individuals (Saputra & Muharammah, 2020). Podcast media is a new form of innovation to develop students' academic stress prevention skills in consulting services by counsellors. Podcasts as a digital medium with a series of audio or video episodes (Kusuma et al., 2020) is innovative and creative for counsellors. This research aims to emerge the feasibility of podcast media in consulting services to develop students' academic stress prevention abilities.

Method

Research Variable

This study has three variables. Three variables are (a) students' academic stress in online and blended learning conditions, (b) consulting services by counsellors, and (c) podcast media as a support for consulting services. The three variables are adjusted to current conditions and millennial and digital guidance and counselling services.

Research design

The research and development design that adopts the Brog&Gall concept is limited to the fifth stage. The podcast media development stage in consulting services for academic stress prevention skills is based on a preliminary study in the first stage. The second stage is to prepare a hypothetical draft of academic stress prevention materials and skills in consulting services with podcast media. The third stage is to develop podcast media that can be implemented in consulting services with academic stress prevention skills. Service studies as the fourth stage on validators of material experts, media experts, and practitioners, namely counsellors. The fifth stage is the revision of the service study, which has been analyzed qualitatively and quantitatively.

Data Collection Technique

Eligibility questionnaire to validators according to material experts, media experts, and practitioners, namely counsellors, to determine the feasibility of podcast media. The results of the service study as the final design of podcast media for developing students' academic stress prevention skills in a pandemic or post-pandemic conditions by counsellors. The last data are discussed qualitatively.

Data Analysis Technique

Quantitative analysis as an element of the feasibility of podcast media in consulting services. The first stage of the feasibility analysis results from material experts, media experts, and practitioners (counsellors) quantitatively with percentages. The second stage is internet analysis with the help of the SPSS application to determine the reliability of podcast media. The results of the interpretation of the feasibility of media experts, material experts, and practitioners, with the support of reliable media podcats in counselling services as final data.

Commented [U2]: convey concisely and clearly, without including the theory of experts as a definition

Results and Discussion

Result

Media podcasts from the feasibility test results get assessments from material experts, media experts, and counsellor practitioners. The media expert's evaluation results in media expert's evaluation with an average value of 90% can be used for the development of academic stress prevention skills. Media experts rate with an average score of 85%, so podcasts as a media consulting service help students with academic stress prevention with various skills. Counsellors in schools assess podcasts as media for the current era with an average score of 90%. The average rating of the three assessments is 88.3% or excellent criteria. The evaluation results recommend that the podcast media support consulting services by counsellors, especially the prevention of academic stress.

Table 1. Feasibility of Podcast Media in Consulting Services for Development of Academic Stress Prevention Skills

No	Product Test Aspect	Average Value
1	Material Expert Test	90%
2	Media Expert Test	85%
3	Test of Practitioner or Counselor	90%
	Amount	265%
	Score	88,3%
	Category	Very good

Tested the results of the assessment for reliability with the Intraclass Correlation Coefficient (ICC). The results of the Intraclass Correlation Coefficient test with a significance of $0.006 \leq 0.05$. These data indicate that podcast media in consulting services are relevant and feasible in developing academic stress prevention skills. The analysis for the consistency rater is 0.750, which means it has a pretty good consistency. The meaning of good enough is that podcast media in consulting services is quite relevant to developing students' academic stress prevention skills.

Table 1. Uji Reliabilitas-Interater Media Podcast dalam Layanan Konsultasi untuk Pengembangan Keterampilan Pencegahan Stres Akademik

Discussion	Intraclass Correlation ^a	95% Confidence Interval		F Test with True Value 0

	Average Measures	.750 ^c	.268	.932	4.000	9

Commented [U3]: 1. In the discussion section, please compare the results of the study with the model or theory referred to
 2. express the author's opinion, in-depth related to the research you produce one by one
 3. explain the meaning of the findings broadly

not only to communicate with other people but also as a medium to convey information (Sudarmoyo, 2020). This media is relevant compared to other media because it can be used directly or indirectly as a messenger. This media is applicable as a consultation media in developing academic stress prevention skills. Podcasts as audio-visual media as messengers through the internet network with millennial devices (Rajic, 2013). Can indirectly podcast media in consulting services through iPhones, cellular phones, laptops, and other computer devices. The podcast themes are varied and creative to support the professional counsellor profession in any field, making it relevant for post-millennial era counsellors.

School counsellors' podcasts in consultation services can convey messages and various content through broadcasts or face-to-face (Ridha, 2021). Podcasts are indirectly in audio and video that others can listen to (Laila, 2021). Podcast variations and innovations in consulting services are relevant and meaningful to students or counselees. Individuals with academic stress problems can listen and analyze the content of messages directly from podcast media. If they meet face-to-face with counsellors, they can practice skills in preventing academic stress. As shown in Figure 1, podcasts are interactive media that support consulting services by professional counsellors.

Figure 1. Media Podcast yang Interaktif

Podcasts from research results combined in consulting services to develop academic stress prevention skills according to the steps for making podcasts. Podcasts are generally made from pre-production, production, and review (Mayangsari & Tiara, 2019). The three stages of consulting with podcast media to develop academic stress prevention skills have fulfilled the pre-production stage with needs analysis and relevant content in academic stress prevention with skills for students. Production is carried out directly in the implementation of consulting services, and then it can be helpful for students as video and audio media. The review of podcast results can be used as a follow-up for classical guidance services, group guidance, and counselling services. Message content, material content, the follow-up to podcasts (Chan dkk., 2006) are relevant for counsellors to use. The podcast media is a learning tool with interesting, exciting material (Fadilah dkk., 2017). Podcasts also provide convenience for learning purposes (Asmi, 2019). Especially in consulting services, podcast media can be used anytime and anywhere by re-listening or downloading through the WhatsApp Group application and the web (Abidin & Widodo, 2018).

Conclusions and Suggestions

Academic stress due to the Covid-19 pandemic has an impact on the world of education. Academic stress affects learning achievement. Professional counsellors use face-to-face or virtual consultation services with podcast media. Media podcasts are relevant and appropriate to use to help prevent academic stress. Material content in academic stress prevention is supported and integrated to foster skills in helping academic stress prevention. Podcast media can be implemented directly in consulting services or indirectly so that podcast media recordings can be downloaded or viewed again as a support for guidance and counselling services.

The urgency of the future counsellor's professionalism with the use of digital media is by podcasts in guidance and counselling services. Relevant podcasts in the implementation of guidance and counselling services, primarily consulting services. Consultation with individual settings or group settings with podcast media is an element of novelty in the millennial era. Professional counsellors continuously adapt to the development of the digital age in guidance and counselling services.
