**Abstract**

Latar belakang: Pandemi Covid 19 merubah seluruh aktivitas kehidupan manusia, salah satunya adalah pengendalian Demam berdarah dengue (DBD). Tingginya kasus Covid-19 dan penularan yang sangat cepat menyebabkan semua aktivitas yang menimbulkan interaksi antar manusia banyak dikurangi termasuk aktivitas kader jumentik dalam memeriksa jentik di rumah penduduk. Pemerintah, tenaga kesehatan dan masyarakat sangat fokus pada pengendalian Covid-19, hal ini menurunkan upaya pengendalian DBD sehingga selama pandemi Covid-19 kasus DBD meningkat. Tujuan dari penelitian ini adalah untuk mengetahui kepedulian masyarakat pengendalian DBD pada saat pandemi Covid-19. Metode: Metode penelitian adalah kuantitatif dengan desain survei. Teknik pengambilan sampel dengan accidental sampling dan jumlah sampel 215 di seluruh wilayah Indonesia. Pengambilan data dilakukan secara online menggunakan google form pada bulan Mei sampai Juni 2021. Hasil: Hasil penelitian menunjukkan bahwa hubungan antara jenis kelamin dengan semua variabel kepedulian masyarakat terhadap pengendalian DBD tidak terdapat hubungan yang signifikan ( $p$  value  $\geq 0,05$ ), meskipun demikian jika dilihat dari distribusi frekuensi mayoritas masyarakat bersedia dilibatkan dalam semua upaya pengendalian DBD. Terdapat hubungan yang signifikan antara tingkat pendidikan dengan kesediaan mengurus tempat penampungan air bersih di rumah ( $p$  value = 0,005) dan dengan prioritas pengendalian penyakit ( $p$  value = 0,002). Terdapat hubungan yang signifikan antara jenis pekerjaan dengan prioritas pengendalian penyakit ( $p$  value = 0,001). Terdapat hubungan yang signifikan antara persepsi bahwa DBD adalah penyakit berbahaya dengan kesediaan memeriksa jentik di rumah masing masing menunjukkan adanya hubungan yang signifikan ( $p$  value = 0,015). Simpulan: Kepedulian mayoritas masyarakat terhadap pengendalian DBD sudah baik, akan tetapi perlu dilakukan promosi kesehatan agar prioritas pengendalian Covid-19 tidak mengesampingkan pengendalian DBD.
