INTRODUCTION

Introduction

- High antioxidant activity
- Poorly soluble in water

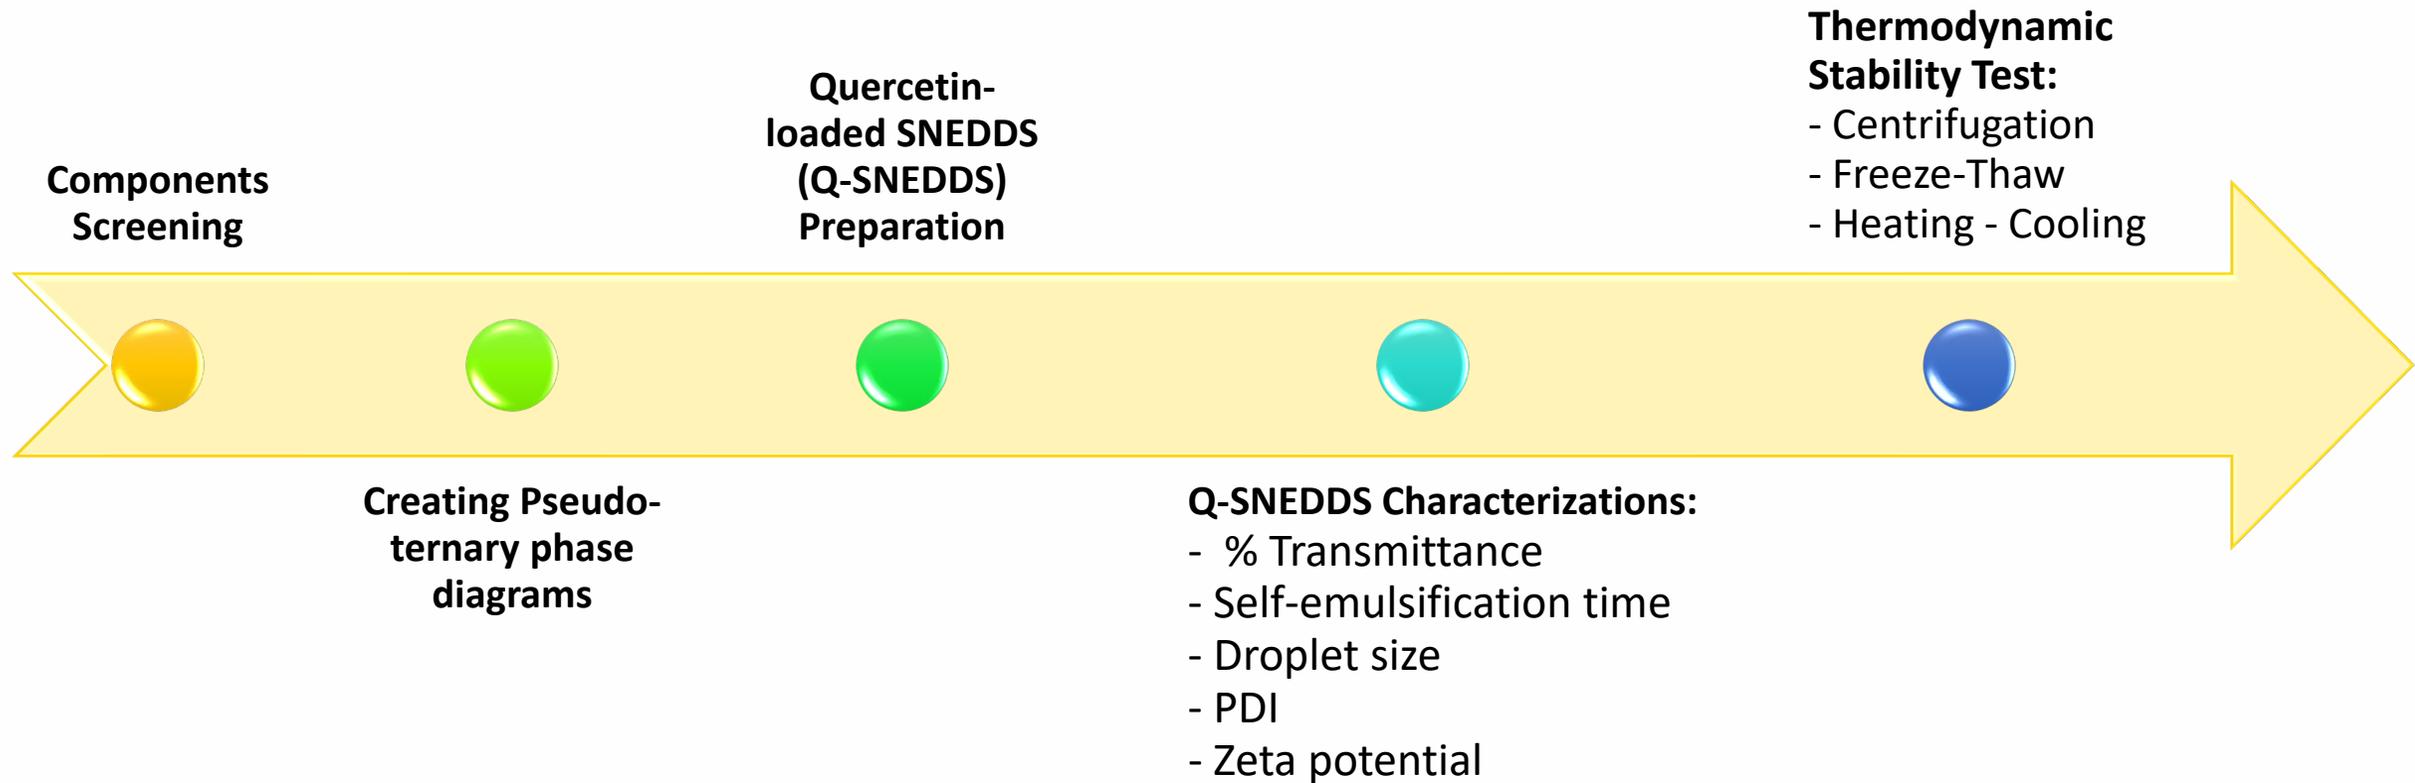

Aim: to appropriately select composition of the oil, surfactant, and co-surfactant and its ratio, used for encapsulating quercetin into SNEDDS

- Enhance drug solubility
- Enhance oral drug absorption
- Increase oral bioavailability

CONCLUSION

- SNEDDS with a composition of triacetin (20%, v/v), Cremophor[®] RH 40 (60-70%, v/v), and Transcutol[®] HP (10-20%, v/v) is preferred for quercetin-loaded SNEDDS.
- This composition and ratio enables the production of Q-SNEDDS with desirable physical characteristics and good thermodynamical stability.
